

Credit Name: CSE 2140 2nd language programming

Assignment Name: Chapter 3 Mastery #1

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

- I approached the assignment through looking at my previous code and looking at the patterns before starting the new code.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

- A few parts were confusing but I've read the textbook to guide me through it.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

- I took smaller steps before I started coding, as I mentioned before I took a look at my previous code for the skill builder to improve my pattern recognition skills before starting to code.

How did you decide on the tools, data structures, or algorithms to use?

- I use the same scanner code to get the user input.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

- I implemented the big code right away but I was working solely through the input process then the processing then the display or the outcome.

How did you test your solution along the way to make sure it was working?

- I tested the code as much as I could before finalizing it

Overcoming Challenges

What part of the problem was the most difficult for you?

- Reading the textbook can get confusing sometimes

How did you handle moments when you felt stuck or unsure of what to do next?

- I asked the others for help or reading through the textbook

Learning

Was there anything you learned that you think will help you with future challenges?

- The assignment helped me understanding the algorithms of coding better as well as improving my pattern recognition skills
