

Credit Name:CSE 2140

Assignment Name: Chapter 4 mastery

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

I started the assignment by closely looking at the requirements of what I'd have to do, and take a closer look at my past projects or at examples of what I could reuse in the new code.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

mapping out the conditions were quite tricky at first.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

I broke the code down into smaller pieces so that it'd be easier to code each portion.

How did you decide on the tools, data structures, or algorithms to use?

I relied on scanner and if else statements a lot on my codes.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I wrote the code in smaller portion and test if it works for each portion.

How did you test your solution along the way to make sure it was working?

I ran the console really frequently and tested if it'd work as I work on the code

Overcoming Challenges

What part of the problem was the most difficult for you?

Ensuring the input range was the hardest part for me in this assignment

How did you handle moments when you felt stuck or unsure of what to do next?

I reviewed past examples whenever I'm stuck

Learning

Was there anything you learned that you think will help you with future challenges?

Practicing with the if else statements would definitely help me in the future as I use that a lot in my codes.
