Credit Name:Chapter 5
Assignment Name: Mastery #2, "Investment"

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
I approached the assignment by reading through the context of the textbook to help with the assignment, since most of the information are in there.
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
Some of the new loops concept can be quite challenging but I've got the hang of it.
Planning the Solution
Did you create a plan or break the problem into smaller steps before coding?
I've took the code into smaller parts, the codes aren't exactlylong but I've read the textbook over a lot of times and looked over my old codes to see if I could reuse anything.
How did you decide on the tools, data structures, or algorithms to use?
All of it were based on the textbook.
Implementation
Did you write the code in small pieces or attempt the entire solution at once?
I mostly wrote it all at once since it was small and not that long.
How did you test your solution along the way to make sure it was working?
I try to run console as much as I could.
Overcoming Challenges
What part of the problem was the most difficult for you?
Some of the new loop concepts were pretty challenging, but I used external sources to help myself.
How did you handle moments when you felt stuck or unsure of what to do next?
I often talked to my mates or just used ai for suggestions.
Learning
Was there anything you learned that you think will help you with future challenges?
The loop structure would most likely help me in the future.
